

TRANSFORMING TRAINING AND IN-SERVICE SUPPORT WITH DIGITAL TOOLS

ABOUT MODEST TREE

Modest Tree is a software company working with global manufacturers and service providers of complex assets to help them leverage digital tools to transform the way they train on operations and maintenance procedures and deliver after-sales service through a connected, digital service hub. Globally-leading organizations responsible for maintenance and service are transforming the way they train and connect workers.

Modest Tree develops immersive training and digital twin solutions to contextualize data, train staff, and inform decision making. We help organizations visualize their physical assets, operations, and processes in immersive applications (VR, AR, desktop, tablet, and mobile).

Modest Tree is an award-winning training company and accolades include: A Top 75 Canadian Defence Company in 2020, 2019 and 2018, Military Training and Simulation Outstanding Innovative Product 2019, Military Simulation and Training Magazine - Outstanding VR/AR/MR Application Finalist 2019 and, Training Industry Gamification company to watch in 2019.

SOFTWARE PRODUCTS

VIRTUAL IMMERSIVE LEARNING PLATFORM

- Global Multiplayer Across Platform Types
- Rapid Development and Deployments
- No Coding & User-Friendly Interface
- Instructor-Led Training, & Familiarization

Today's learners demand engaging and immersive learning materials and complex equipment operations and maintenance procedures can be readily visualized in an immersive environment. We leverage 3D models and technical/operational manuals to visualize the operational procedures and maintenance procedures on complex equipment. Delivered through Xplorer, end-clients control access to learning scenarios and can readily update all learning content directly, maintaining control of the lessons and delivering on their platform of choice (desktop, tablet, virtual reality, augmented reality).

A MODULAR, DIGITAL DIGITAL SERVICE HUBS

- Digital Work Cards
- Remote Assist
- Visualized IoT integration/Condition Monitoring
- Visualized, 3D work instructions
- Streamlined service reporting

Tech Companion is a digital system of modules to connect workers and provide operational insights. Modules such as remote expert support, visualized condition-monitoring, and digital work cards connect workers with the right people and information for service delivery and reporting.

Tech Companion is a digital tool that integrates enterprise data to streamline the way complex assets are operated and maintained, forming a digital service-hub for technicians and operators to access relevant data for the task and condition of an asset and facilitate connectivity. The digital service hub is customizable based on your organization's data requirements, enabling flexibility and efficiency in your organization's delivery of service.

SERVICES

Modest Tree offers a full suite of service and software offerings, supporting our clients, as required in the development of training and customization of digital service hubs.

- 3D Modelling Support
 - 3D Model Creation
 - Optimization for Delivery in AR/VR
- Immersive Content Development
 - Maintenance & Operational training in a virtual training environment
 - Complex, Multipath, Interactive Procedural Task Trainers
- 3D Model Creation And CAD Optimization Services
- Courseware Development Services (Desktop, Mobile, Virtual Reality, Mobile Augmented Reality, HMD Mixed Reality)
- Create Visualized digital twins, integrating IoT data/condition monitoring information
